workflow-mapping-template

AI-Enhanced Workflow, Mapping Template

Exercise 4: Your AI-Enhanced Workflow (3:20 PM - 4:00 PM)

What you'll do: Pick one recurring task from your real job and redesign it with AI assistance.

Part	Time	What You Do
Part 1: Map	10 min	Document your current workflow
Part 2: Redesign	15 min	Identify where AI adds value and redesign
Part 3: Test	10 min	Try one AI-assisted step live
Part 4: Share	5 min	2-minute lightning presentation to your table

---

Part 1: Map Your Current Workflow (10 min)

Choose your task

Pick a task you do at least weekly that takes 30+ minutes. It should be something you find repetitive or time-consuming.

My task:

How often do I do this?

Weekly / Fortnightly / Monthly / Other: _____

How long does it typically take?

_____ minutes

Document the current steps

Write each step of how you do this task today. Be specific, include the tools you use and what you do at each step.

Step	What I Do	Tool/System	Time (min)
1			
2			
3			
4			
5			
6			
7			
8			

Total current time: _____ minutes

Identify the pain points

What makes this task tedious, slow, or frustrating?

- ☐ Lots of manual data entry or copying between systems
- ☐ Repetitive writing or formatting

- ☐ Gathering information from multiple sources
- ☐ Summarising or synthesising large amounts of content
- ☐ Doing the same analysis each time with different data
- ☐ Creating the same type of document over and over
- ☐ Other: _____

Part 2: Redesign with AI (15 min)

Classify each step

Go back to your steps above. For each one, use the **AI Opportunity Finder** to classify it:

Step	Current Task	AI Opportunity Type	AI Could...
1		Automate / Assist / Generate / Analyse / Human-Only	
2		Automate / Assist / Generate / Analyse / Human-Only	
3		Automate / Assist / Generate / Analyse / Human-Only	
4		Automate / Assist / Generate / Analyse / Human-Only	
5		Automate / Assist / Generate / Analyse / Human-Only	
6		Automate / Assist / Generate / Analyse / Human-Only	
7		Automate / Assist / Generate / Analyse / Human-Only	
8		Automate / Assist / Generate / Analyse / Human-Only	

Quick reference, AI Opportunity Types: - **Automate:** Routine, pattern-based, no judgment needed - **Assist:** Research, synthesis, gathering, AI does legwork, you evaluate - **Generate:** Writing, drafting, content creation, AI drafts, you edit - **Analyse:** Data, patterns, trends, AI crunches, you interpret - **Human-Only:** Empathy, ethics, judgment, relationships, keep this yours

Design the new workflow

Rewrite your workflow with AI integrated at each applicable step. For AI-assisted steps, note what tool you'd use and what prompt you'd write.

Step	What Happens	Who Does It	Tool	Estimated Time
1		Me / AI / Both		
2		Me / AI / Both		
3		Me / AI / Both		
4		Me / AI / Both		
5		Me / AI / Both		
6		Me / AI / Both		
7		Me / AI / Both		
8		Me / AI / Both		

Estimated new total time: _____ minutes

Time saved: _____ minutes (_____%)

Check your redesign

Before moving on, sanity-check your new workflow:

- [ ] Is there still a human review step before anything goes out?
- [ ] Am I keeping Human-Only tasks for myself?
- [ ] Does any step involve putting confidential data into a free AI tool? (If so, reconsider.)
- [ ] Is the time estimate realistic, or am I being optimistic?
- [ ] Would this workflow still work if the AI gives a bad output? (What's my fallback?)

Part 3: Test One Step Live (10 min)

Pick the single most promising AI-assisted step from your redesign. Try it right now.

Step I'm testing:

The prompt I used (apply RTCF):

Component	My Input
Role	
Task	
Context	
Format	

What happened:

Quality of output (circle one): Usable as-is / Needs minor editing / Needs heavy editing / Not usable

What I'd change next time:

Part 4: Lightning Presentation (5 min)

Prepare a 2-minute summary for your table. Cover:

1. **My task:** What it is and how long it takes now
2. **The biggest AI opportunity:** Which step benefits most from AI
3. **My redesign:** What the new workflow looks like
4. **What I tested:** What happened when I tried it live
5. **What I'll try first on Monday:** My next step

Before / After Summary

	Before	After
Total time		
Steps requiring my full attention		
Steps AI handles or assists with		
Biggest improvement		
Biggest risk to manage		

My Commitment

The one AI-assisted step I will actually try at work this week:

What I need to do to make that happen (set up tool, prepare data, write prompt):

How I'll know if it worked:
